## Abstract

## 1 Introduction

## 2 Footnotes, Verbatim, and Citations

```
int main(int argc, char *argv[])
{
    return 0;
}
```

The tilde character (~) in the tex source means a non-breaking space. This way, your reference will always be attached to the word that preceded it, instead of going to the next line.

---

<sup>1</sup>Remember that USENIX format stopped using endnotes and is now using regular footnotes.

paper, ridding you from the need to notice that, e.g., “Waldspurger” appears after “Arpachi-Dusseau” when sorting references alphabetically [?, ?].

Now we're going to take a look at Section ??, but not before observing that refs to sections and citations and such are colored and clickable in the PDF because of the packages we've included.

### 3 Floating Figures and Lists

Here's a typical reference to a floating figure: Figure ??.

Floats should usually be placed where latex wants them. Figure?? is centered, and has a caption that instructs you to make sure that the size of the text within the figures that

you use is as big as (or bigger than) the size of the text in the caption of the figures. Please do. Really.

In our case, we've explicitly drawn the figure inlined in latex, to allow this tex file to cleanly compile. But usually, your figures will reside in some file.pdf, and you'd include them in your document with, say, `\includegraphics`.

Lists are sometimes quite handy. If you want to itemize things, feel free:

`fread` a function that reads from a `stream` into the array `ptr` at most `nobj` objects of size `size`, returning returns the number of objects read.

`Fred` a person's name, e.g., there once was a dude named Fred who separated `usenix.sty` from this file to allow for easy inclusion.

The noindent at the start of this paragraph in its tex version makes it clear that it's a continuation of the preceding paragraph, as opposed to a new paragraph in its own right.

### 3.1 LaTeX-ing Your TeX File

People often use `pdflatex` these days for creating pdf-s from tex files via the shell. And `bibtex`, of course. Works for us.

### Acknowledgments

The USENIX latex style is old and very tired, which is why there's no `\acks` command for you to use when acknowledging. Sorry.

**Do not include any acknowledgements in your submission which may deanonymize you (e.g., because of specific affiliations or grants you acknowledge)**

## **Ethical Considerations**

**Within up to one page, explain the ethical considerations of your work. This appendix must have exactly this title, otherwise you will risk desk rejection. Carefully study the Ethics Guidelines before submitting your paper.**

## **Open Science**

**Within up to one page, this appendix must list all artifacts necessary to evaluate the contribution of the paper and make clear how the review committees can access each artifact. This appendix must have exactly this title, otherwise you will risk desk rejection.**
